

Connecting to WC-Secure from a Windows 7 device

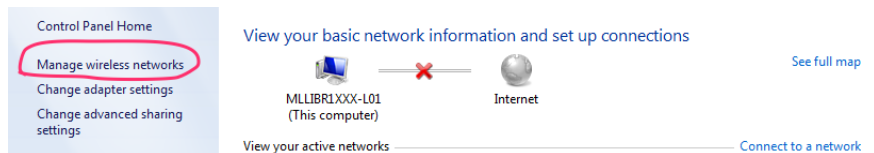

1. Click on the **Start** button and select **Control Panel**

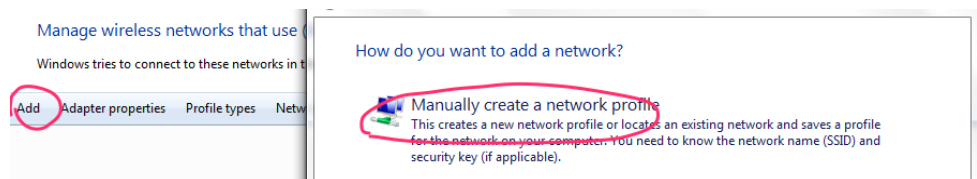

2. Select **Network and Sharing Center**

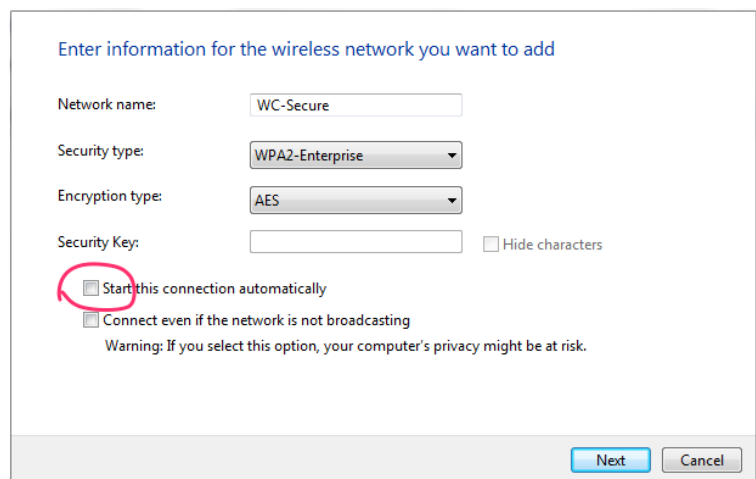

3. Click on **Manage wireless networks**

4. Click on **Add** and **Manually create a network profile** in the popup.

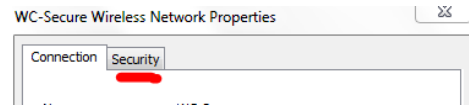

5. Enter **WC-Secure** for the Network name, select **WPA2-Enterprise** in the drop down and deselect **Start this connection automatically** then click on **Next**

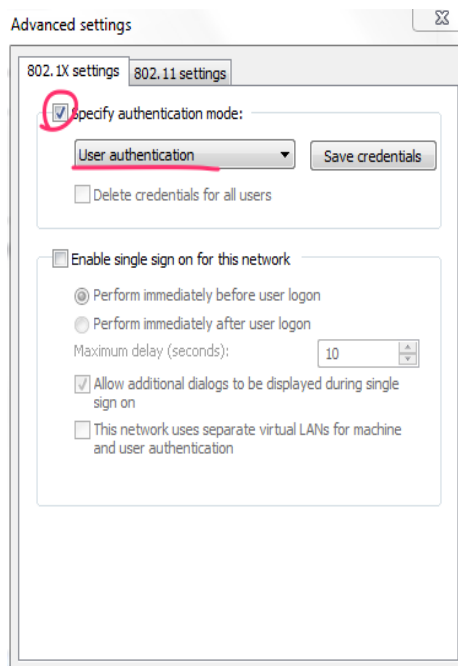

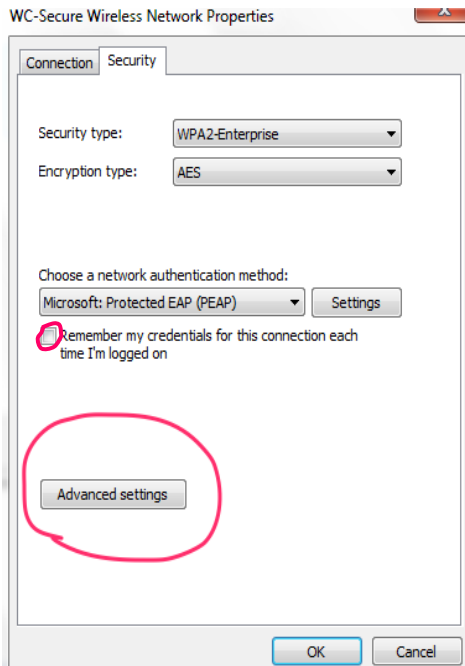

6. Click on **Change connection settings**

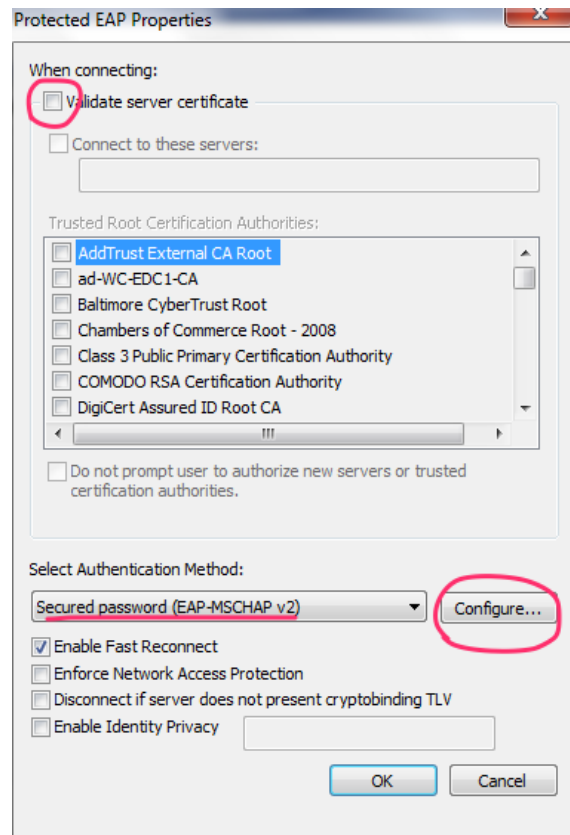

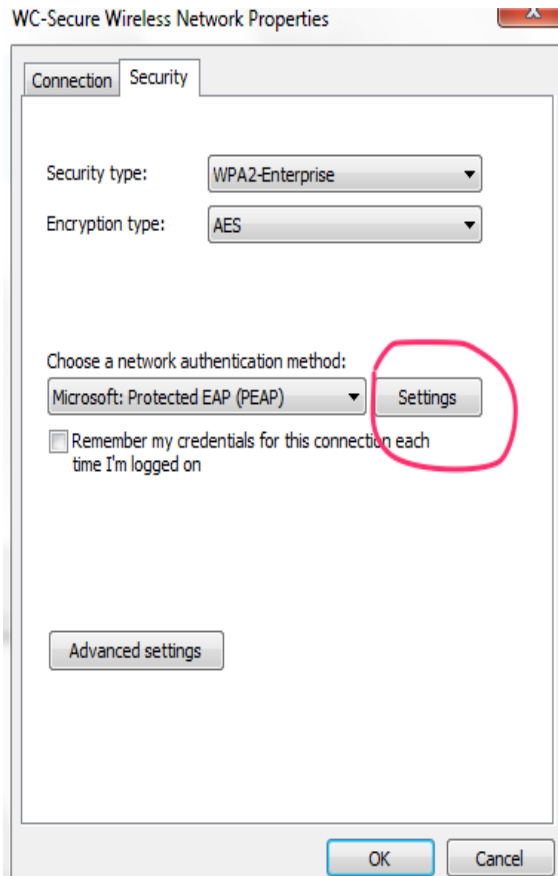

7. Select the **Security** Tab

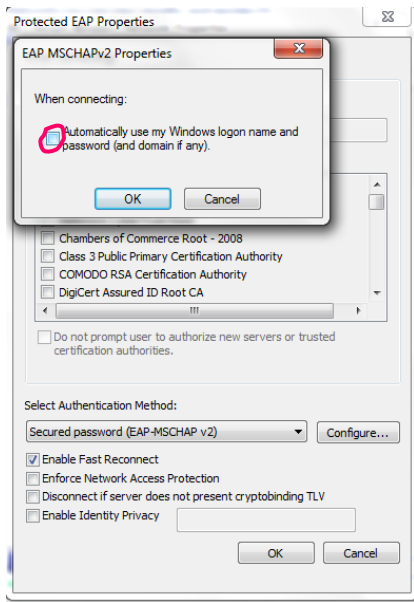

8. Make sure that **Remember my credentials** is unchecked, click on **Advanced settings** and under the **802.1X settings** tab check **Specify authentication mode**, select **User authentication** and click **OK**

9. Click on **Settings**, deselect **Validate server certificate** and click on **Configure**

10. Deselect **Automatically use my Windows login...** and click OK for all open Windows.

11. You can now click on the WiFi icon on the bottom right side of your task bar, select **WC-Secure**, click on **Connect** and enter your Westminster user name and password when prompted
